The list below was from Tate directly, and he noted RD-1 is [REDACTED] upstream, and RD-2 is [REDACTED] downstream (I assumed they were surface water results).

sorry missed that! Yes they did!. I'll modify the chart to identify they are mg/l Thanks!

Also it appears that R-1 is total, RD-1 is [REDACTED] dissolved, if the letter from Tate K. matches up....?? He alleges some samples are filtered and that is all I can figure with some of the identifiers..probably wrong, but we need to clarify!

Thanks Karen,  
Just need to move the decimal over on the glycols. They were reported in milligrams per liter.

The identifiers provided by Tate Kunkle are as follows:

H-1: [REDACTED]  
FH- [REDACTED]  
FP- [REDACTED]  
S-1: [REDACTED]  
R-1: **Ex. 6 - Personal Privacy**  
R-2: [REDACTED]  
RD- [REDACTED]  
RU- [REDACTED]  
KDE [REDACTED]  
N-1: unknown  
D-1: unknown

TC-1: unknown  
AW-2: unknown

Still unsure about the 2 [redacted] wells versus 1 well for which we previously received data.

KDE is [redacted] which is where we met Tate and [redacted] I also asked if [redacted] well is the same well as the KDE well to be certain of the sample origins. No response yet. The FPT-1 is supposed to be for the trailer on Carter Road which we visited late in the day.

Bob- I pulled the high values from the recent package for organics, but I don't have the key for where the samples were taken so I just put the sample identifier, I know some are Dissolved/F for filtered, but not sure of most names

[attachment "Organics in Dimock.xlsx" deleted by Robert Helverson/R3/USEPA/US]

PS the last file in the Dimock file- September Part 2 is actually a piece of the Part 1 September data it is a duplicate of maps 108-about 196. Part 1 goes through 216 of 2137. Thanks!
